PHOTON IS OUR BUSINESS

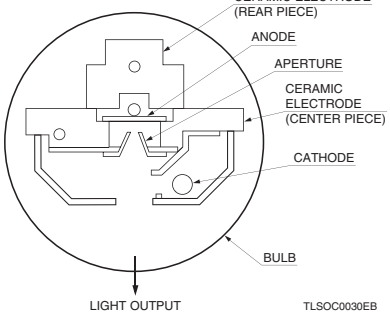
DEUTERIUM LAMPS (D_2 LAMPS)

D_2 LAMPS

FOR HIGH PERFORMANCE DEVICES

Hamamatsu deuterium lamps (D_2 lamps) deliver a long lifetime, excellent stability, and high output to the highest levels to allow users to obtain the maximum performance characteristics from their equipment.

Construction (L2D2)



Hamamatsu deuterium lamps key features and the reasons

Long lifetime

1 UV-transmitting glass

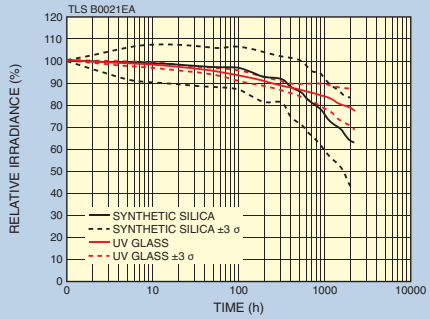
❍**Problems with prior lamps using quartz glass**

- Premature deterioration in transmittance cause by UV light
- Quality variations due to production process and material inclusions
- Troublesome ozone generation

❍**We solved these problems by using UV-transmitting glass superior to quartz glass!!**

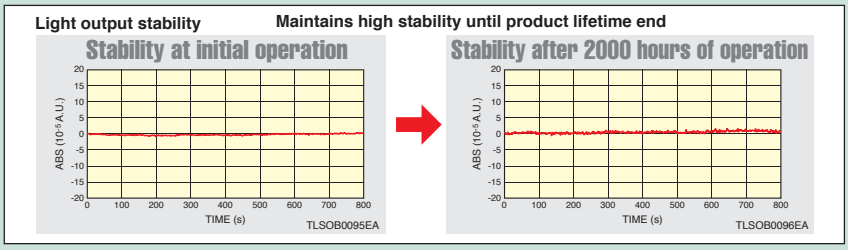
- **High resistance to UV light**
- **High quality with less variations**
- **No ozone generation**

Life characteristics



High stability

Light output stability — **Maintains high stability until product lifetime end**



2 Ceramic electrode

❍**Problems with prior lamps using (Metal electrode)**

- Low stability due to being susceptible to ambient conditions
- Large variation in light output because electrode spacing is not uniform

❍**We solved these problems by using ceramic electrodes with excellent temperature characteristics!!**

- **Excellent temperature characteristics ensure high stability**
- **Uniform electrode spacing minimizes variations in characteristics**

3 Cathode (Super quiet type)

❍**Problems with conventional directly-heated type**

- Concentrated radiated heat damage applies a large load to the cathode
- Vibration and operating time directly affect cathode deterioration

❍**We solved these problems of the directly-heated type by using a super quiet cathode!!**

- **Electron emission capability with minimal fluctuations**

Lighting performance

4 Capacitor

❍**Problems with D_2 lamp without auxiliary ignition**

- Fails to light up due to electrode deterioration during long-term operation
- Fails to light up due to decrease of internal gas during long-term operation
- Fails to light up when the lamp is hot and in case of re-igniting right after turning off

❍**We solved these problems with the conventional lighting method by using auxiliary lighting method!!**

- **Secured lighting even if the lamp is hot or at the end of lifetime**

Deuterium lamps are light source lamps that utilize an arc discharge in deuterium (D_2) gas. They emit an intense spectrum in the UV region and have feature of unrivaled stability compared to other UV light sources.

PRODUCT LINE-UP / APPLICATION LIST

33 W

X2D2® LAMPS

High brightness deuterium lamps

High-end light sources that offer the world's highest luminance among the 30 W class * (twice that of L2D2 lamps)

P3

*As of Feb. 2016 according to our research

30 W

L2D2® LAMPS

Long lifetime deuterium lamps

Best-selling light sources that deliver the high quality and high performance required by chemical analysis instruments while keeping costs low

P5

5 W to 7 W

S2D2® LAMPS

Compact deuterium lamps

Compact yet high-performance light sources that were impossible to create up till now with conventional deuterium lamps

P11

110 W

H2D2® LAMPS

Ultra-high luminance deuterium lamps

Next-generation light sources that have achieved the highest luminance in the history of deuterium lamps

P14

*As of Feb. 2016 according to our research

Applications \ Window material	UV glass	Synthetic silica	MgF_2
HPLC (High Performance Liquid Chromatography)	◎	○	×

Photoionization Light Source	×	×	◎
Static Electricity Removal by Vacuum UV Light	×	×	◎

◎: Optimum ○: Usable according to application ×: Not generally suitable

Peripheral devices that support high performance

Total support for extracting maximum lamp performance

To enable lamps to exhibit their maximum performance, it is important to design an optimum housing and power supply. We do not only sell deuterium lamps but also provide power supplies and housings specifically designed for deuterium lamps.
Besides selling our own products, we provide technical support to help users design their own lamp housings and power supplies. We are also glad to offer advice on optimal electrical ratings and lamp shapes that meet user specifications.
Please consult with us for specifications that are not listed in our product catalog.

X2D2® LAMPS

The X2D2® lamps (high brightness & long lifetime deuterium lamps) deliver unparalleled brightness twice that of L2D2 lamps (see page 5) while still maintaining the high stability and long lifetime offered by the conventional deuterium lamps. These characteristics will enhance sensitivity and throughput in various photometric instruments.

Features

- Long life: 2000 h
- High stability: 0.005 %(p-p) typ.
- High brightness: 2 times higher than L2D2 lamps

■Arc distribution

●X2D2 lamp Aperture size: 0.5 mm

Filament ratings	Warm-up	Voltage	2.5 ± 0.25					V dc
		Current (Typ.)	4					A dc
	Operating	Voltage	1.7 ± 0.2					V dc
		Current (Typ.)	3.3					A dc
Filament warm-up time (Min.)			20					s
Power supply Ⓒ			C9559, M9521					—
Lamp house			E9522-50, E9558-50					—
Bulb wall temperature Ⓓ			245 to 290					°C

ⒶLamp life end is defined as the point when light output at 230 nm falls to 50 % of its initial value or when output fluctuations exceed 0.05 % (p-p).
ⒷA trigger voltage must be applied to the anode and auxiliary electrode. ⒸThe power supply for the L2D2 cannot be used to operate X2D2 lamps.
ⒹRecommended temperature for operating a lamp in the lamp housing. Consult us on how to measure the temperature.
ⒺDoes not support vacuum evacuation and so should be used in nitrogen atmosphere.
* Custom lamps not listed above will be available on request. Please feel free to contact us.

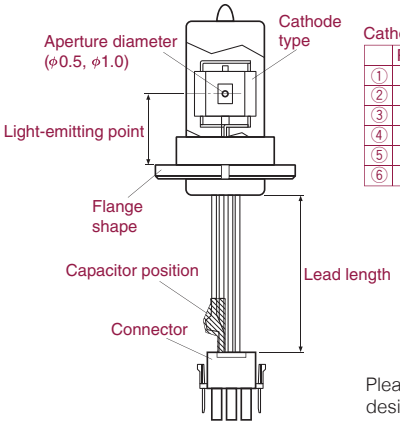
L2D2® LAMPS

The L2D2® lamps are UV light sources with a long service lifetime and high stability. These L2D2 lamps have characteristics essential for light sources used in chemical analysis instruments and provide high measurement accuracy.

Features

- Long life: 4000 h (L6565)
- High stability: 0.005 %(p-p) typ.
- Small intensity variations
- Low cost
- Error-free lighting

Example of custom-designed lamp



Cathode ratings

	Preheating	Operating
①	2.5 V	1.0 V
②	2.5 V	1.7 V
③	3.0 V	0 V – 1 V
④	10 V	2.5 V – 6 V
⑤	10 V	7 V
⑥	12 V – 15 V	0 V

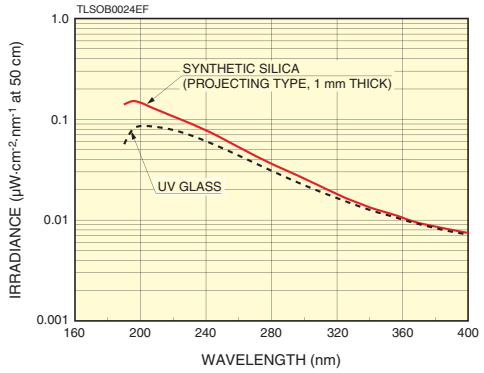
ⒶSee pages 7 and 8.
Ⓑ Lamp life end is defined as the point when light output at 230 nm falls to 50 % of its initial value or when output fluctuations exceed 0.05 % (p-p).
Ⓒ A pulse voltage higher than this value must be supplied to start reliable lamp discharge.
Ⓓ Operating life may vary depending on operating environmental conditions (vacuum atmosphere).

Characteristics

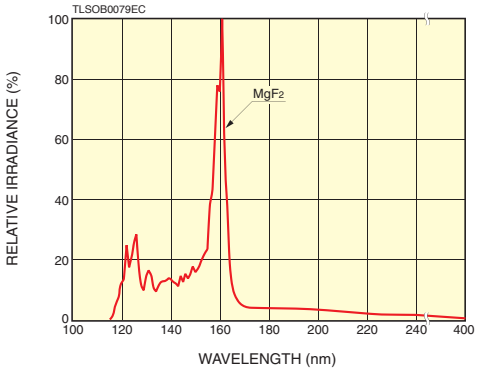
●Spectral distribution

Deuterium lamps emit high intensity light in the UV range at wavelengths shorter than 400 nm. Light intensity on the short wavelength side is determined by the window material used.

■UV glass, Synthetic silica

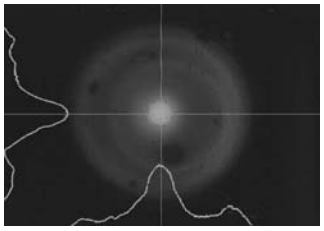


■MgF_2

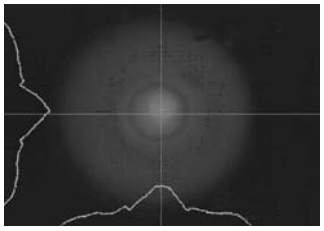


●Arc distribution

Arc distribution of deuterium lamps is determined by the aperture (light exit) size. At the same input current and voltage, lamps with a 0.5 mm aperture provide 1.4 times higher intensity than lamps with a 1.0 mm diameter aperture.



APERTURE: ϕ0.5 mm



APERTURE: ϕ1.0 mm

●Directivity (Light distribution)

Ⓔ If the cable between the lamp and power supply is too long, a large filament voltage drop occurs in the cable that might make the lamp filament voltage too low. The filament power supply should be designed to supply the specified voltage at the lamp input terminal.
Ⓕ Recommended operating voltage is 3.5 V ± 0.5 V.
Ⓖ During lamp operation a discharge current flows into the filament so no external power supply is needed to maintain the filament temperature.
Ⓗ To extract full performance from our deuterium lamps we recommend using our dedicated power supplies.
Ⓘ Recommended temperature for operating a lamp in the lamp housing. Consult us on how to measure the temperature.
* Custom lamps not listed above will be available on request. Please feel free to contact us.

X2D2® LAMPS | **L2D2® LAMPS**

POWER SUPPLY FOR D_2 LAMPS LAMP HOUSE

Applications using deuterium lamps require very high stability of light output, so using a Hamamatsu dedicated power supply and lamp house is recommended to operate these lamps. When users are designing their own power supply and lamp housing, we provide technical support and follow-up to ensure an optimal optical design so please consult us when needed.

Fiber light source

■APPLICATIONS

- ●Spectrophotometry
- ●Environmental measurement
- ●Absorption spectrum measurement
- ●Microtiter plate reader
- ●Pharmaceutical testing
- ●High-performance liquid chromatography
- ●Biological measurement
- ●Semiconductor inspection
- ●Optical component inspection

Compact UV-VIS S2D2 fiber light source L12515

The L12515 is the world's smallest UV-visible fiber light source containing an S2D2® compact deuterium lamp. Despite its small size, the L12515 delivers high output and high stability. Its compact, easy-to-carry size and low voltage operation make it useful for various types of portable devices.

Features

- ●Compact: 72 mm × 40 mm × 90 mm
- ●High stability: Fluctuation 0.004 % p-p (Typ.) (equivalent 2 × 10^{-5} A.U.)
- ●External control
- ●Shutter function

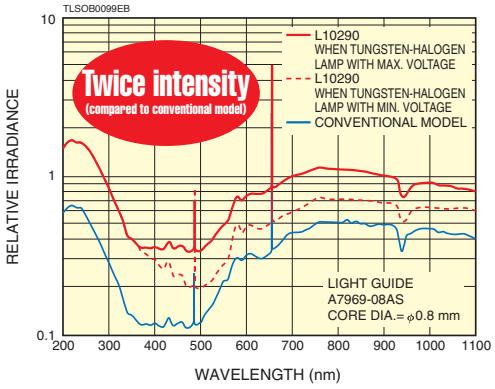
High power UV-VIS fiber light source L10290

The L10290 is a high power UV-visible fiber light source that outputs 200 nm to 1600 nm light through a light guide (sold separately). The L10290 utilizes a high brightness deuterium lamp (X2D2 lamp) to provide radiant intensity that is about twice that of our conventional products. These features make it easier to use a UV-visible light source with high power and high stability.

▲L10290

Characteristics

●Spectral distribution (Typical data)



Features

- ●High output: Twice intensity (Compared to conventional model)
- ●High stability: Fluctuation 0.004 % p-p (Typ.) (equivalent to 2 × 10^{-5} A.U.)
- ●Long life lamp: 2000 hours
- ●External control
- ●Shutter function
- ●Filter holder (Sold separately)

VUV light source

- ●Electrostatic remover
- ●Film thickness measurement
- ●Spectrophotometry
- ●Semiconductor inspection
- ●Material resistance evalution
- ●Photoionization source
- ●Dechucking of electrostatic chucks
- ●LCD manufacturing equipment

H2D2 light source unit L11798/-01, L11799/-01

The H2D2 light source unit contains a high-brightness, high-end deuterium lamp (H2D2 lamp) that emits light at a brightness 6 times higher than our current deuterium lamps (L2D2 lamps). Despite its high brightness, the H2D2 is highly stable, has a long service life, and allows air-cooled operation by a specially designed housing. This feature makes it much more convenient and easy to use than ordinary water-cooled lamps.
The H2D2 can be used in various applications and enhances equipment sensitivity and throughput.

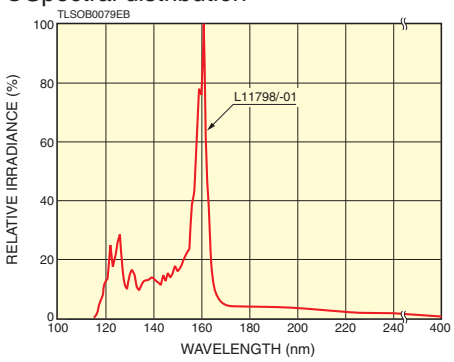
Features

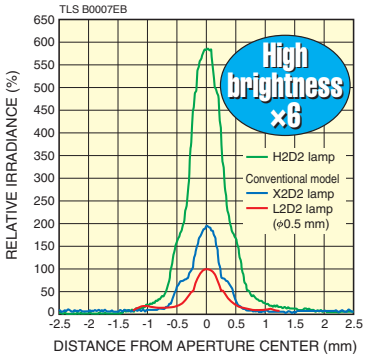
- ●High brightness: 6 times
  (Compared to L2D2 lamp)
- ●High stability: Fluctuation 0.05 % p-p (Max.)
  Drift ±0.3 %h (Max.)
- ●Long life: Warranty of 1000 hours
- ●Air cooling (needs no cooling water)
- ●External control

Characteristics

●Spectral distribution



●Arc distribution



Electrostatic remover VUV ionizer L12542

Due to its wide irradiation angle about 3 times larger than our current VUV light source, the L12542 efficiently removes electrostatic charges over large areas in depressurized or vacuum environments.
Up until now two or more VUV light sources were needed to neutralize electrostatic charges in large areas due to their limited irradiation angle. The L12542 solves this problem and efficiently neutralizes large areas in a vacuum.

S2D2 VUV light source unit L10706 series

The S2D2 VUV light source unit is a vacuum ultraviolet light source unit that incorporates a compact deuterium lamp with an MgF_2 window.
Equipped with a SUS flexible tube with a vacuum flange and a unique cooling mechanism, this light source unit allows irradiating objects or samples at a very close distance, and can be installed and operated under depressurized conditions.
The compact lamp unit and SUS flexible tube offer greater flexibility in attaching the light source unit to various types of equipment.

■HANDLING PRECAUTION

1. Deuterium lamps emit ultraviolet rays which can be harmful to eyes and skin. Do not look directly at the emitted light or allow direct exposure to skin. Always wear protective glasses or goggles and clothing when operating the lamps. (Refer to JIS T 8141 or equivalent safety standards).
2. Since the bulb wall temperature reaches a high temperature (over 200 °C) during lamp operation, do not touch it with bare hands or bring inflammable objects near it.
3. Do not apply vibrations or mechanical shocks to the lamp. These might cause light output stability to deteriorate.
4. Graded sealing of synthetic silica and MgF_2 window:
   On bulbs using synthetic silica or MgF_2 window, the window is formed by so-called "graded sealing" which connects different glasses with slightly different expansion rates. Since the mechanical strength of the seams of this graded sealing is low, use caution when securing the lamp so that no force is exerted on those seams during use.
5. Before turning on the lamp, wipe the bulb and window gently using alcohol or acetone. Do not handle the lamp with bare hands. Dirt or smears on the window will cause a significant drop in ultraviolet transmittance.
6. High voltage is used to operate these lamps. Use extreme caution to prevent electrical shock.
7. Be sure to avoid to store the lamp under high humidity and high temperature. Also, in case the lamp is not used for a long time, it with package in the place where shock or vibration is not applied.
8. Handling MgF_2 and synthetic quartz windows:
   UV light generates ozone when it irradiates an atmosphere containing oxygen. The amount of the generated ozone is low and so does not affect the human body but does produce an ozone smell. So ventilate the room from time to time when using a lamp with an MgF_2 or synthetic quartz window in a closed room.

■WARRANTY

Lamps are warranted for a period of one year from the date of shipment. If a lamp is found to be defective within this warranty period, Hamamatsu will replace the defective lamp without charge. (This warranty is limited to replacement of the defective lamp.) Even if within the warranty period (one year), the warranty shall not apply to cases where the lamp operation time has exceeded the guaranteed life, or the trouble was caused by incorrect operation or natural or man-made disasters.

■DISPOSAL OF LAMPS

When disposing of the used lamp, take appropriate measures in compliance with applicable regulations regarding waste disposal and correctly dispose of it yourself, or entrust disposal to a licensed industrial waste disposal company.
In any case, be sure to comply with the regulations in your country, state, region or province to ensure the used lamp is disposed of legally and correctly.
